SUMMARY

Full-Stack Developer with hands-on experience building scalable REST APIs with FastAPI (Python), dynamic frontends with React and TypeScript, and cloud-native applications on AWS. Proven ability to design, deploy, and maintain high-performance web applications, integrate SQL/NoSQL databases, and orchestrate agentic AI workflows. Adept with Docker, Git, CI/CD pipelines, and cross-functional team collaboration in production environments.

TECHNICAL SKILLS

Languages & Frameworks: Python, JavaScript, TypeScript, FastAPI, Django, React, Next.js
AI / ML: TensorFlow, Keras, Scikit-learn, LangChain, LangGraph, RAG Pipelines, CNNs, Transfer Learning
Data & Databases: PostgreSQL (SQL), ChromaDB, Redis (NoSQL), Pandas, NumPy
DevOps & Cloud: AWS, Docker, Jenkins, CI/CD, Git, Linux

WORK EXPERIENCE

Full-Stack AI Engineer (Intern) — HakiChain (hakichain.com) May 2026 – Present
Nairobi, Kenya | Blockchain & AI Legal-Tech Startup

- Built HakiLens, a production agentic legal research assistant using FastAPI backends, LangGraph agentic workflows, tool calling, web search, and citation retrieval — deployed on AWS with Docker and CI/CD.
- Developed and maintained REST APIs consumed by React frontends and blockchain services, following clean architecture and modular design principles.
- Reduced lawyer research time by 80% through scalable API design, database optimization (PostgreSQL + ChromaDB), and efficient LLM inference pipelines.
- Collaborated with Blockchain, Frontend, and Backend teams on system integration, CI/CD workflows, and iterative model improvement for production inference.

PROJECTS

TradeAI — *Python · FastAPI · React · TypeScript · LangChain · ChromaDB · TwelveData API · Docker*

- Designed and built a full-stack AI-powered forex trading intelligence platform — FastAPI REST backend, React/TypeScript frontend, and agent-based analysis pipelines combining RSI, MACD, EMA, ADX, and Bollinger Bands signals with LLM reasoning and RAG-based financial knowledge retrieval.
- Implemented Flutterwave payment integration, JWT authentication, and Docker-based deployment with CI/CD.

AfyaSync AI — *Django · FastAPI · React · LangGraph · LangChain · PostgreSQL · Redis · Docker*

- Built a telemedicine platform with RAG-based clinical assistant, real-time WebSocket communications, JWT authentication, audit logging, Electronic Medical Records encryption, and extensible IoT health monitoring integrations — deployed with Docker and AWS.

AgriScan — *Python · TensorFlow · MobileNetV2 · EfficientNetB0 · Django · LangChain · ChromaDB*

- Trained CNN models via transfer learning achieving ~97.2% training / ~92.6% validation accuracy at ~240ms inference; integrated RAG advisory, M-Pesa payments, and multilingual farmer support.
- Attained 1st position in the School of Pure and Applied Sciences Innovation Competition at Karatina University.

EDUCATION

B.Sc. Computer Science — Karatina University, Kenya 2023 – Expected 2027

CERTIFICATIONS & ACHIEVEMENTS

- AWS Scholars: Analyze Data using AI with PartyRock | Udacity / AWS, May 2026
- AWS Scholars: Build Your First AI Productivity App | Udacity / AWS, May 2026
- Hackathon Winner — Cash prize for AI-powered road safety & emergency response solution.
- SPAS Competition — 1st Position for AgriScan based on impact, accuracy metrics, and technical depth.
